

Program Outcome

- Identify modern AI-driven scams including Deepfakes and Voice Cloning.
- Apply the CIA Triad to secure business data and financial transactions.
- Detect AI-assisted malware before it penetrates your network.
- Establish a culture of security with low-cost, high-impact best practices.

WHY CHOOSE THIS PROGRAM?

- HRD Corp Registered Provider: Zero upfront cash required for levy contributors.
- SME Focused: No "bombastic" technical words; just clear, actionable steps.
- Future-Proof: While others teach "old" scams, we focus on the AI threats of 2026.

100% HRD Corp Claimable Under HRD Corp Focus Area: Cybersecurity & AI

In 2026, the digital battlefield has shifted; scammers no longer rely on suspicious emails or clumsy phishing attempts. Today, they leverage sophisticated AI to clone executive voices with eerie accuracy, generate deepfake videos of "trusted" partners, and deploy custom-coded viruses that adapt to your security in real-time.

That is the reason we provide with this intensive, 1-day program that specifically designed to flip the script, transforming your employees from your "weakest link" into a formidable "strongest defense." We strip away the intimidating technical jargon and provide your team with practical, direct tools and psychological frameworks to identify and neutralize threats before they can penetrate your business.

Cyber Threats & Scams Training for SMEs

(SLB-KHAS COMPLIANT)

MASTERING THE NEW FRONTIER OF AI-DRIVEN RISKS
